Imagined idea: https://www.youtube.com/watch?v=8fzSP1sr_aA and
https://www.youtube.com/watch?v=_Kz85y12a-g
https://humanizing.com/en

I think it is the closest product to us

-_____
Services needed

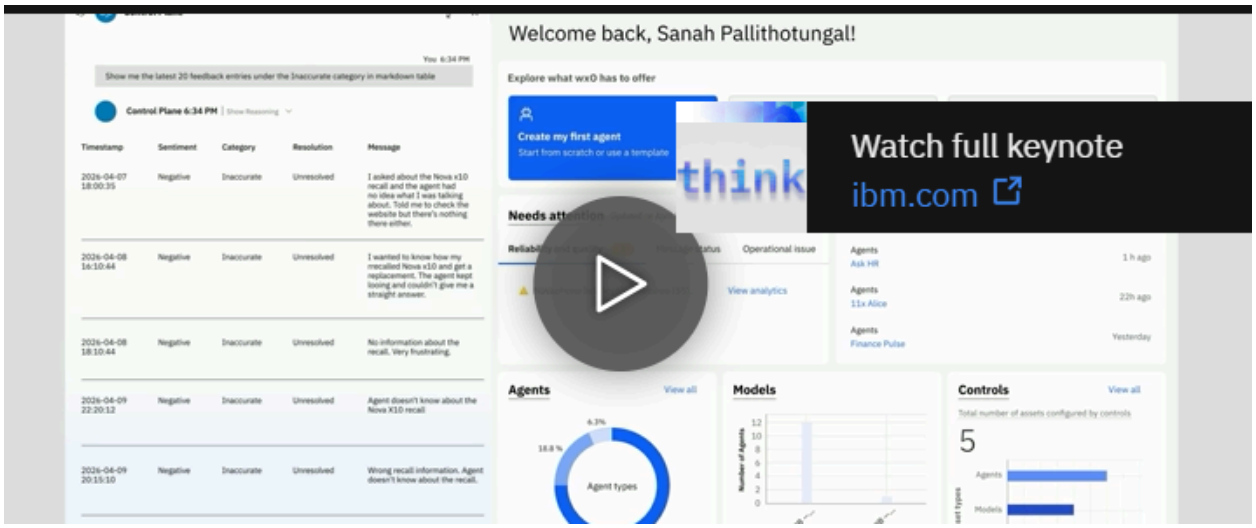

1. Doctor search, hospital directions, approved service/price inquiry, (APIs)
2. appointment request or booking, (mcp)
3. WhatsApp and live-agent handoff. (APIs also)

The solution should contains RAG also
patient data and integrations controlled by hospital, all should back to the hospital tools

Pilot in one selected lobby or outpatient area before scaling to more channels, departments, AR wayfinding, VR education, and voice-agent services.

Somehow new to us Wayfinding,
We will use “agent orchastration”:
https://www.ibm.com/think/topics/ai-agent-orchestration?utm_medium=OSocial&utm_source=Youtube&utm_content=WAIWW&utm_id=YT-101-What-is-Agent-Orchestration
Really important to try bob

They are talking about a dashboard so I think it is sth like, All relevant transactions -> Audit Log / Analytics / Monitoring

If we are working with this team, the task will be easier

4. Team Model and Governance

Role	Primary responsibility	Minimum allocation
Executive Sponsor	Removes blockers; approves scope, funding, and pilot go-live.	Part-time
Product Owner - Operations / Patient Access	Owns patient journeys, priority, acceptance, service content.	1 named owner
Project Manager / Business Analyst	Plan, backlog, dependencies, workshops, risks, reporting.	1 FTE
Backend / Integration Developers	Workflow APIs, HIS/scheduling/CRM/WhatsApp integration.	2 FTE
Frontend / Kiosk Developers	Kiosk/web UI, accessibility, devices, avatar SDK integration.	1-2 FTE
AI / RAG Engineer	Retrieval, guardrails, prompt routing, evaluation and monitoring.	1 FTE
DevOps / Infrastructure Engineer	Environments, CI/CD, secrets, monitoring, deployment.	0.5-1 FTE
Cybersecurity / Privacy Lead	Threat model, controls, review, penetration testing.	0.25-0.5 FTE
Clinical / Quality Content Owner	Clinical boundaries, escalation text, content review.	0.5 FTE
Arabic Content Reviewer	Arabic quality, terminology, local patient language testing.	0.5 FTE
Contact Center Representative	Live-agent flow, escalation rules, operational UAT.	0.5 FTE

We have some ways to grap this to reality dividing the solution to wayfinding and the other tasks

1. Using Alexa: we can Alexa + 11Labs + HeyGen: but this way will give us shortage in achieving the multi-agent system they are asking for.
2. Using LangGraph: working on investigating it.

Never : Diagnosis, medication advice, autonomous clinical triage, full EMR access, AR/VR production rollout, facial recognition.
